**Question Paper Code: 31181** 

## B.E. / B.Tech. DEGREE EXAMINATION, MAY 2017

Elective

Civil Engineering

## 01UCE908 - CONCRETE TECHNOLOGY

(Regulation 2013)

Duration: Three hours Maximum: 100 Marks

**Answer ALL Questions** 

PART A -  $(10 \times 2 = 20 \text{ Marks})$ 

- 1. What is the role of  $C_3S$  and  $C_3A$  on the properties of cement?
- 2. What is Gap Graded Aggregate?
- 3. Define accelerators.
- 4. How plasticizers are important for concrete?
- 5. Distinguish between Plasticizers and Superplasticizers.
- 6. What are the factors affecting choice of concrete mix design?
- 7. How does water cement ratio affect the strength of concrete?
- 8. What is Abram's law? Explain the factors affecting the compressive strength of concrete.
- 9. Define classification of light weight concrete.
- 10. Define aspect ratio.

PART - B (5 x 16 = 80 Marks)

11. (a) Explain various tests to be done on coarse and fine aggregates. (16)

Or

(b) Explain the use and chemical composition of following cements: (i) Quick setting Cement (ii) Sulphate resisting Cement (iii) Low heat Cement (iv) Portland Pozzolana Cement. (16)

| 12. | (a) | Define Admixtures. Enlist the different types mineral admixtures used in concre<br>Describe briefly the influence of three most important mineral admixtures<br>concrete. |           |
|-----|-----|---|-----------|
|     |     | Or  |           |
|     | (b) | Explain the mechanism of action and advantages of following chemical admixtures concrete: (i) Retarders (ii) Accelerators (iii) Water proofers. (1                        | in<br>6)  |
| 13. | (a) | Compare the salient features of the BIS, ACI and DOE methods of concremix-design.   | ete<br>6) |
|     |     | Or  |           |
|     | (b) | Design a concrete mix by BIS method with the following data:  |           |
|     | (0) | Characteristic compressive strength = $35 N/m^2$  |           |
|     |     | Maximum size of aggregate = 20 mm (angular)   |           |
|     |     | Fine aggregates confirm to grading zone II  |           |
|     |     | Degree of workability = $0.80$  |           |
|     |     | Degree of quality control good  |           |
|     |     | Type of exposure mild   |           |
|     |     | Specific gravity of cement-3.14   |           |
|     |     | Specific gravity of fine aggregate-2.58   |           |
|     |     | Water absorption  |           |
|     |     | (i) Coarse aggregate-Nil  |           |
|     |     | (ii) Fine aggregate-1.9%  |           |
|     |     | Water cement ratio-0.48   |           |
|     |     | Assume any other data if necessary. (1  | 6)        |
| 14. | (a) | Explain the lab tests to determine the tensile strength of concrete and write commer  | ıts       |
|     |     | on the tensile strength value obtained from these tests. (1   | 6)        |
|     |     | Or  |           |
|     | (b) | Discuss factors influence strength of hardened concrete. (1   | 6)        |
| 15. | (a) | What is high performance concrete? Describe the tests to be performed to check to accompability of any one high Performance concrete.                                     |           |
|     |     |   | 6)        |
|     |     | Or  |           |
|     | (b) | What is Geo polymer concrete? Discuss the parameter involved in the producing Geo polymer concrete. (1  | of<br>6)  |
|     |     |   |           |
