## Question Paper Code: 91355

B.E./B.Tech. DEGREE EXAMINATION, NOVEMBER/DECEMBER 2014.

## Sixth Semester

Computer Science and Engineering

CS 2352/CS 62/10144 CS 602 — PRINCIPLES OF COMPILER DESIGN

(Regulation 2008/2010)

(Common to PTCS 2352-Principles of Compiler Design for B.E. (Part-Time) Fifth Semester-Computer Science and Engineering-Regulation 2009)

Time: Three hours

Maximum: 100 marks

## Answer ALL questions.

$$PART A - (10 \times 2 = 20 \text{ marks})$$

- 1. What is the role of lexical analyzer?
- 2. Write regular expression to describe a languages consist of strings made of even numbers a and b.
- 3. List out the various storage allocation strategies.
- 4. Write a CF grammar to represent palindrome.
- 5. What are the types of intermediate languages?
- 6. Give syntax directed translation for case statement.
- 7. Differentiate between basic block and flow graph.
- 8. Draw DAG to represent a[i] = b[i]; a[i] = & t;
- 9. Represent the following in flow graph i = 1; sum = 0;  $while(i \le 10)\{sum + = i; i + +;\}$
- 10. What is global data flow analysis?

## PART B — $(5 \times 16 = 80 \text{ marks})$

11. (a) (i) Explain the need for grouping of phases of compiler. (8)

(ii) Explain a language for specifying the lexical analyzer. (8)

Or

- (b) (i) Write short notes on compiler construction tools. (8)
  - (ii) Explain specification and recognition of tokens. (8)

		(ii)	Explain — runtime environment with suitable example. (8	<b>i)</b>
			$\mathbf{Or}$	
	(b)	Fine	d the LALR for the given grammar and parse the sentence (a+b)*c	
		E –	$\Rightarrow E + T/T, T \rightarrow T * F/F, F \rightarrow (E)/id$ . (16)	)
13.	(a)		erate intermediate code for the following code segment along with thaired syntax directed translation scheme	е
		Whi	le (i<10)	
		· If (i	% 2 = = 0)	
		Eve	nsum = evensum + i;	
		Else		
		Odd	sum =oddsum + i;	
		•	$\mathbf{Or}$	
	(h)	Com	onata intermodiate and for the following and accompany along with th	_
	(b)		erate intermediate code for the following code segment along with the tired syntax directed translation scheme.	_
		s=s+	-a[i][j];	
1 1	(a)	(i)	Explain register allocation and assignment with suitable example	
LT.	(a)	(1)	Explain register amocation and assignment with suitable example (8	
•		(ii)	Explain — code generation phase with simple code generation algorithm. (8	
			$\mathbf{Or}$	
	(b)	(i)	Generate DAG representation of the following code and list out the applications of DAG representation. (8	
			i = 1; while (i<=10) do	
			sum + = a[i];	
•	•	(ii)	Explain — Generating code from DAG with suitable example. (8	)
<b>l</b> 5.	(a)	(i)	Explain — principle sources of optimization. (8	)
		(ii)	Illustrate optimization of basic blocks with an example. (8	)
			$\bigcap_{\mathbf{r}}$	
	<b>(1.)</b>	1771		
•	(b)	_	lain peephole optimization and various code improving sformations.	_

Explain the specification of simple type checker.
