Question Paper Code: 39035

B.E. / B.Tech. DEGREE EXAMINATION, NOV 2017

Elective

Electrical and Electronics Engineering

01UEE915 - FLEXIBLE AC TRANSMISSION SYSTEM

(Regulation 2013)

Duration: Three hours

Maximum: 100 Marks

Answer ALL Questions

PART A - $(10 \times 2 = 20 \text{ Marks})$

- 1. What is the need for reactive power compensation?
- 2. Define the term 'FACTS'.
- 3. What is effective short circuit ratio in SVC?
- 4. Define voltage stability.
- 5. What is Bang -Bang control in TCSC?
- 6. List the application of TCSC.
- 7. What are the applications of SSSC?
- 8. What is the function of STATCOM?
- 9. State the advantages of genetic algorithm in controller co-ordination.
- 10. Write the frequency ranges for different control techniques.

PART - B ($5 \times 16 = 80$ Marks)

Or

- (b) Discuss the effect of shunt and series compensation on power transmission capacity. (16)
- 12. (a) List and explain the advantages of slope in the dynamic characteristics of SVC. (16)

Or

- (b) Explain how SVC can be used to enhance the power transfer capacity of a transmission line. (16)
- 13. (a) Explain the principle of operation of TCSC. Also explain the various modes of operations. (16)

Or

(b) Enumerate the variable reactance modeling of TCSC to enhance the system stability.

(16)

(16)

14. (a) Explain the operation and the V-I characteristics of STATCOM with diagram. (16)

Or

- (b) Describe the procedure of modeling SSSC for load flow studies. (16)
- 15. (a) Explain in detail about different control interaction.

Or

(b) Describe in detail about SVC-SVC interactions. (16)
