## **Question Paper Code: 53323**

## B.E. / B.Tech. DEGREE EXAMINATION, NOV 2023

## Third Semester

## Mechanical Engineering

| 15UEE323 - ELECTRICAL MACHINES (Regulation 2015) |                       |  |                                 |                          |  |  |  |  |
|--|-----------------------|--|---------------------------------|--------------------------|--|--|--|--|
| Durat  | tion: Three hours     |  | LL Questions                    | Maximum: 100 Marks       |  |  |  |  |
|  |                       | PART A - (10                                     | $0 \times 1 = 10 \text{ Marks}$ |                          |  |  |  |  |
| 1. 1   | D.C. motors are wi    | dely used in                                     |                                 | CO1- R                   |  |  |  |  |
| (  | (a) Pumping sets      | (b) Air compressors                              | (c) Electric traction           | (d) Machine shops        |  |  |  |  |
| 2.   | Working Principle     | of Motor   |                                 | CO1- R                   |  |  |  |  |
| (  | (a) Fleming Right I   | Hand Rule  | (b) Ohms Law                    |                          |  |  |  |  |
| (  | (c) Fleming Left Ha   | and Rule   | (d) None of the Abov            | e                        |  |  |  |  |
| 3.   | A transformer core    | is laminated to reduce                           | 2                               | CO2- R                   |  |  |  |  |
| (  | (a) Hysteresis loss   | (b) Copper loss                                  | (c) Eddy current loss           | (d) All the above losses |  |  |  |  |
| 4.   | An ideal transforme   | er has   |                                 | CO2- R                   |  |  |  |  |
| (  | (a) Core loss         |  | (b) Magnetic leakage            |                          |  |  |  |  |
| (  | (c) No winding resi   | stance   | (d) None of the above           |                          |  |  |  |  |
| 5.   | Star-delta starting o | of motors is not possib                          | le in case of                   | CO3- R                   |  |  |  |  |
| (  | (a) Single phase mo   | otors  | (b) Variable speed mo           | otors                    |  |  |  |  |
| (  | (c) Low horse power   | er motors  | (d) High speed motor            | S                        |  |  |  |  |
|  | •                     | ase supply is given to<br>peed of the machine is | a four pole induction           | motor. CO3- R            |  |  |  |  |
| (  | (a) 3000 rpm          | (b) 1500 rpm                                     | (c) 1000 rpm                    | (d) 750 rpm              |  |  |  |  |

| 7.  | Syn   | chronous condensers are used to   |                                |                              | CO4- R     |
|-----|---|---|--------------------------------|------------------------------|------------|
|     | (a) I   | mprove starting torque  | (b) Improve the power fa       | (b) Improve the power factor |            |
|     | (c) I   | Reduce hunting  | (d) All of the above           |                              |            |
| 8.  | In a  | synchronous motor, damper wind  | ings are provided on           |                              | CO4- R     |
|     | (a) I   | Rotor shaft (b) Stator fra  | me (c) Pole faces              | (d) None of the              | above      |
| 9.  | An  | universal motor is also called as   |                                |                              | CO5- R     |
|     | (a) I   | nduction motor (b) Synchronor   | us motor (c) AC series mot     | or (d) Steppe                | er motor   |
| 10. | The   | electric motor used in portable dri   | ll is                          |                              | CO5- R     |
|     | (a) (   | Capacitor run motor   | (b) Universal motor            |                              |            |
|     | (c) I   | Hysteresis motor  | (d) Repulsion motor            |                              |            |
|     |   | PART – I  | 3 (5 x 2= 10 Marks)            |                              |            |
| 11. | Def   | ne back emf and give its expression   | on.                            |                              | CO1 R      |
| 12. | . Classify different types of transformers.               |   |                                | CO2 R                        |            |
| 13. | Write the torque equation of three phase induction motor. |   |                                |                              | CO3 R      |
| 14. | . Define Hunting  |   |                                |                              | CO4 R      |
| 15. | List  | the applications of BLDC motor.   |                                |                              | CO5 R      |
|     |   | PART -  | - C (5 x 16= 80 Marks)         |                              |            |
| 16. | (a)   | Sketch the construction of DC I parts associated with it.                                     | Motor and explain about vari   | ous CO1-U                    | (16)       |
|     |   | (   | )r                             |                              |            |
|     | (b)   | <ul><li>(i) Plot and explain various chara</li><li>(ii) Develop the torque equation</li></ul> |                                | CO1- U<br>CO1- U             | (8)<br>(8) |
| 17. | (a)   | Sketch the single phase transconstruction and working princip                                 | <u> -</u>                      | its CO2-U                    | (16)       |
|     |   | (   | )r                             |                              |            |
|     | (b)   | (i) Derive the expression for EM  | F equation of a Transformer.   | CO2- U                       | (8)        |
|     |   | (ii) Obtain the equivalent circuit short circuit test on transformer.                         | by using the open circuit test | and CO2- U                   | (8)        |

| 18. | (a) | Explain the construction and working principle of three phase induction motor.   | CO3-U  | (16) |
|-----|-----|--|--------|------|
|     |     | Or   |        |      |
|     | (b) | Discuss briefly about types of starting methods of three phase induction motor.  | CO3-U  | (16) |
| 19. | (a) | Recognize the principle of operation of a synchronous motor with a neat sketch. Also demonstrate how it can be self started. | CO4- U | (16) |
|     |     | Or   |        |      |
|     | (b) | Explain the starting method and Torque equation of synchronous motor.  | CO4- U | (16) |
| 20. | (a) | Analyze briefly about any two types of single phase induction motor.  Or   | CO5- U | (16) |
|     | (b) | (i) Recognize the principle of operation of a universal motor with a neat sketch.  | CO5- U | (8)  |
|     |     | (ii) Generalize with construction and circuit diagrams, the operation of a hysteresis motor.                                 |        | (8)  |
|     |     |  |        |      |
